

Image Measurements using ImageJ

1. Download and open the ImageJ application
2. File > Open... open folder where images are stored (JanInduction_FullImages_Final)
3. Click on the straight line in the ImageJ toolbar
4. Analyze > Set Scale... **172 pixels = 500um** of known distance. Check 'Global' to set this scale for all images.

5. **Headspine measurement:**

measure using the straight line tool from the top of the eye to the tip of the headspine. Hit 'Command-M' (on Mac) to record measurement.

6. **Body length measurement:**

measure using the straight line tool from the top of the eye to line where the brood chamber connects at the base of the tailspine. Hit 'Command-M' (on Mac) to record measurement.

7. **Tailspine measurement:**

measure using the straight line tool from the base of the tail to the tip of tail. Hit 'Command-M'
